## THIRD OFFICE ACTION

## Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on August 25, 2003 has been entered.

#### **Amendments**

2. This Office Action is in response to the <u>Amendment and Request for Reconsideration</u> received June 23, 2003. Entry of the amendment was requested in the RCE papers submitted on August 25, 2003. Claims 1-39 are pending in this application.

## **Double Patenting**

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438; 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground

Art Unit: 1775

provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

- 4. Claims 1-39 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-28 of U.S. Patent No. 6,586,110. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the patent and the claims of this application both claim a contoured structural member having a continuous plurality of contoured metal-containing layers in an inner section and an outer section and further having and an intermediate section of a ribbed structure. Although it is noted that the claims of the patent specify that the intermediate section is honeycomb structure and the claims of this application do not limit the ribbed structure to honeycomb structures, the claims of this application cover honeycomb structure intermediate layers and therefore there is no patentable distinction between the intermediate layers. [It should be noted that the claims of this application (e.g. claims 16, 18-20) also specifically claim that the ribbed structure is a "honeycomb core".]
- 5. Claims 1-39 are provisionally rejected under the judicially created doctrine of double patenting over the pending claims of copending Application No. 09/898,519. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of both applications claim a contoured structural member having a continuous plurality of contoured metal-containing layers in an inner section and an outer section and further having and

Application/Control Number: 09/900,762

Art Unit: 1775

an intermediate section of a ribbed structure. Although it is noted that the claims of the copending application now recite "a structural component", each section of the contoured structural members of the claims of both applications qualify as a "structural component" and therefore there is no patentable distinction in this limitation. In any event, some claims (e.g. claim 17) of this application specify further structural components. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

#### Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in-
- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
- (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Art Unit: 1775

- 7. Claims 1-2, 5-7, 10-13, 15, 17, 21-24 and 36-39 are rejected under 35 U.S.C. 102(b) as being anticipated by Layte (U.S. Patent 2,816,665).
- Layte discloses a contoured structural member having a continuous plurality of contoured 8. metal-containing layers in an inner section (any of the plurality of inner layers of the article shown in Figure 5) and an outer section (any of the plurality of outer layers of the article shown in Figure 5) and further having and an intermediate section of a ribbed structure (any of the intermediate layers shown in Figure 5). Although it is noted that Layte's inner and outer sections also contain rib structures, the pending claims do not prohibit rib structures in the inner and outer sections. While it is noted that Layte's article is formed from a single wound sheet, the pending claims do not prohibit forming the inner, outer and intermediate sections from single long sheets. Layte shows a further "structural component" attached to the article in Figures 7 (end caps) and Figure 8. Regarding claims reciting an "initiator", any discontinuity in the article (e.g. the holes, ribs, etc...) may function as an initiator. Layte forms his structural member by rolling the sections about a mandrel (e.g. see column 2, lines 43-54). Regarding article claims reciting method steps, Layte may not disclose the same process steps, but these claims are product claims and not process claims. When there is a substantially similar product, as in the applied prior art, the burden of proof is shifted to the applicant to establish that their product is patentably distinct not the examiner to show that the same process of making, see In re Brown, 173 U.S.P.Q 685, and In re Fessmann, 180 U.S.P.Q. 324. Particularly note that in article claims 38 and 39 reciting a method wherein the shrink wrap is added and removed, the shrink wrap would not be present in the claimed final article.

### Response to Arguments

- 9. Applicant's arguments filed June 23, 2003 have been fully considered but they are not persuasive with regards to the remaining rejections. Claims 1-2, 5-7, 10-13, 15, 17, 21-24 and 36-39 are now rejected under 35 U.S.C. 102(b) as being anticipated by Layte (U.S. Patent 2,816,665). The Layte reference was uncovered in a subsequent search of the claims of this application and is particularly relevant in that it is an article made by winding a sheet of ribbed material about a mandrel. While the article of Layte is wound from a single sheet, the pending claims do not prohibit forming the inner, outer and intermediate sections from a single sheet.
- 10. Regarding the rejection of claims 1-39 under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-28 of U.S. Patent No. 6,586,110, although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the patent and the claims of this application both claim a contoured structural member having a continuous plurality of contoured metal-containing layers in an inner section and an outer section and further having and an intermediate section of a ribbed structure. Although it is noted that the claims of the patent specify that the intermediate section is honeycomb structure and the claims of this application do not limit the ribbed structure to honeycomb structures, the claims of this application cover honeycomb structure intermediate layers and therefore there is no patentable distinction between the intermediate layers.
- 11. Regarding the rejection of claims 1-39 under the judicially created doctrine of double patenting over the pending claims of copending Application No. 09/898,519, although the

Application/Control Number: 09/900,762

Art Unit: 1775

conflicting claims are not identical, they are not patentably distinct from each other because the

claims of both applications claim a contoured structural member having a continuous plurality of

contoured metal-containing layers in an inner section and an outer section and further having and

an intermediate section of a ribbed structure. Although it is noted that the claims of the

copending application now recite "a structural component", each section of the contoured

structural members of the claims of both applications qualify as a "structural component" and

therefore there is no patentable distinction in this limitation. In any event, some claims (e.g.

claim 17) of this application specify further structural components.

Conclusion

12. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to John J. Zimmerman whose telephone number is (703) 308-2512.

The examiner can normally be reached on 8:30am-5:00pm, M-F. The fax phone numbers for the

organization where this application or proceeding is assigned are (703) 872-9310 for regular

communications and (703) 872-9311 for After Final communications. Any inquiry of a general

nature or relating to the status of this application or proceeding should be directed to the

receptionist whose telephone number is (703) 308-0661.
